PROFESSIONAL SUMMARY

Results-driven Full-Stack Web Developer with 2+ years of experience designing, deploying, and maintaining scalable web applications across renewable energy and SaaS domains. Proficient in TypeScript, React, Next.js, Node.js, and FastAPI. Demonstrated track record of delivering end-to-end features including dynamic simulation engines, automated notification services, and administrative portals. Currently advancing software design principles through BYU-Pathway Worldwide.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript (ES6+), PHP, Python, HTML5, CSS3, SQL
- **Frontend:** React, Next.js, Angular, Tailwind CSS, Responsive Design, RESTful APIs
- **Backend:** Node.js, Express, FastAPI, Hono.js, Laravel, Microservices Architecture
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Tools & DevOps:** Git, GitHub, Docker, Postman, Linux/Vim, Nginx, Figma, Agile/Scrum

PROFESSIONAL EXPERIENCE

Solar Transit Africa Ltd May 2023 – Present
Full-Stack Web Developer

- Spearheaded full-stack leasing platforms for solar-rent.mu and solar-rent.pro, creating 20-year energy indexation simulators and commercial ROI calculators that reduced quote turnaround time by 35%.
- Engineered B2B administrative portals on solar-rent.pro to manage multi-scenario enterprise simulations, equipment inventory, and long-term lease contract lifecycles.
- Implemented token-based authentication and automated dynamic PDF report generation for pvgis.com, enabling 100+ global solar installers to export technical feasibility reports.
- Pioneered a centralized B2B supplier management interface and built an asynchronous notification service for solardropshipping.com, accelerating supplier onboarding by 20%.
- Streamlined site-visit tracking for solarcenter.mu by delivering an end-to-end audit scheduling web application, optimizing panel placement workflows for field engineering teams.
- Optimized data synchronization across solarpool.mu and mbs457.mu by linking modular UI components with RESTful backend APIs, cutting page load latency by 15%.

KEY PROJECTS

Pulse – SaaS Analytics & User Management Platform 2024
Full-Stack Developer | Next.js, TypeScript, Supabase, Stripe, Tailwind CSS

- Architected a multi-tenant SaaS analytics platform featuring real-time revenue metric cards, 30-day interactive financial charts, and automated team invitation workflows.
- Formulated secure end-to-end Stripe billing and webhook pipelines with Supabase Row-Level Security (RLS), maintaining sub-200ms state synchronization across live demo sessions.

AI-Powered Financial Mobile App API 2024
Backend Developer | Hono.js, TypeScript, OpenAI API, MongoDB, Docker, VPS

- Devised a high-throughput RESTful backend API using Hono.js and TypeScript, integrating OpenAI models to automate transaction classification and personalized budget insights.
- Containerized application services using Docker on a self-managed Linux VPS with Nginx reverse proxy, optimizing MongoDB queries to achieve sub-150ms response times.

EDUCATION

BYU-Pathway Worldwide / BYU-Idaho Anticipated Dec 2027
Bachelor of Science in Software Development

- Coursework: Object-Oriented Programming, Web Frontend Development, Software Design & Architecture, Database Design & SQL.

Institut Supérieur de l'Informatique et du Management d'Entreprise 2022
Diploma in Computer Science / Software Engineering

- Coursework: Algorithms & Data Structures, Relational Database Management (MySQL), Systems Analysis, Web Engineering.
